

Keep Folders Hidden

//////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @
TekGyd | itechhacks | Mukeshtricks4u*////////

first create a new folder somewhere on your hard drive

when you name it hold down "Alt" and press "0160" this will create an invisible space so it will appear as if it has no name.

then right click in and select "Properties" select the tab "customize" and select "change icon" scroll along and you should find a few blank spaces click on any one and click ok when you have saved the settings the folder will be invisible to hide all your personal files
