The registry files you need to delete  
HKEY\_CLASSES\_ROOT and delete all symatec entries (there is alot of entries so dont panic just delete all of them)

Second you need to delete the following  
HKEY\_CURRENT\_USER\Software\Symantec  
and  
HKEY\_LOCAL\_MACHINE\SOFTWARE\Symantec

Finally delte the folders call Symantec  
C:\Program Files\Symantec  
C:\Program Files\Common Files\Symantec Shared  
And the hidden one thats is at (Must enable "Show hidden files and folders" under the file option menu)  
C:\Documents and Settings\All Users\Application Data\Symantec

After doing all this crap reboot and install a fresh copy of Norton
