

First off, I've been doing this for a long time now. I still listen to a lot of the bands I've found by doing this. It's really simple, but it works like a charm. I ALWAYS find cool new stuff -- sometimes even bands that have been around 10 years that I never heard of.

The things you need:

- (Optional) A file sharing program (I use limewire)
- A browser. :]

- 1.) Pick one of your favorite bands.
- 2.) Go to amazon.com or cdnow.com (same thing)
- 3.) Look up that band's name
- 4.) Scroll down until you see "Customers who bought this title also bought:"
- 5.) Browse through the artists you've never heard of in that list.
- 6.) Check out one of their albums, preferably the one with highest rating (in stars)
- 7.) Either listen to the samples on amazon or download a song by them with your filesharing app.

If you like what you hear, repeat steps 3-7 using the new band's name.

You'll find TONS of new music you never thought existed.

It's a really simple way to find stuff, and I'm sure lots of you probably already do this. But for those who don't -- you'll thank me later. It works wonders. :)
