

//////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @
TekGyd | itechhacks | Mukeshtricks4u*////////

I was just asking to know if there is some audience before
here is my method
for hacking anti leech
we gonna use a soft called proxomiton
proxomiton is an anti javascript web proxy it works by applying some rules to eliminate pop up and many
other things but for our case we need to deactivate all this filtering first go to
w-w.proxomiton.info
download a copy of the soft
then you need to unselect all the options of the soft
and click on log window
now go to an anti leech web site
use the plugin and not netpumper
in the plugin
add a proxy
you must put this proxy address
127.0.0.1 8080 for http
the same for ftp
now select the file to download and click download
watch in proxomiton log window you will see many internal forwarding
if the files are located in an ftp server
proxomiton doesn't handle them
and you will find an error
in an ftp address
if it's an http address
you will find something like
get /blablabla/bla/file
site tr.com
and you have found the address
it's tr.com/blabla/file
