

Customize BT4

Customizing the BackTrack Image

Customizing the BackTrack iso is simple, using a pre-made script. Ideally, you should be editing the ISO file
on a BackTrack install

to ensure correct versions of squashfs, etc. Otherwise your mileage will vary. Please note that the script is
very basic, and will

need some modification (such as the hardcoded iso filename, etc). Make sure to look through it before running
it. For more information,

check the following blog post :
