

## Directions

Rapidshare traces the users IP address to limit each user to a certain amount of downloading per day. To get around this, you need to show the rapidshare server, a different IP address. You can do this one of multiple ways.

Requesting a new IP address from your ISP server.

Here's how to do it in windows:

1. Click Start
2. Click run
3. In the run box type cmd.exe and click OK
4. When the command prompt opens type the following. ENTER after each new line.

```
ipconfig /flushdns
```

```
ipconfig /release
```

```
ipconfig /renew
```

```
exit
```

5. Erase your cookies in whatever browser you are using.

6. Try the rapidshare download again.

Frequently you will be assigned a new IP address when this happens. Sometime you will, sometimes you will not.

If you are on a fixed IP address, this method will not work. To be honest, I do not know how to do this in linux/unix/etc. If this works for you, you may want to save the above commands into a batch file, and just run it when you need it.
