Newton 's laws of software. ..

Law 1: Every Software Engineer  
continues his state of chatting or  
forwarding mails unless he is  
assigned work by manager.

Law 2: The rate of change in the  
software is directly proportional  
to the payment received from  
client and takes place at the quick  
rate as when deadline force is  
applied.

Law 3: For every Use Case  
Manifestation there is an equal  
but opposite Software  
Implementation.

Law 4 : Bugs can neither be  
created nor be removed from  
software by a developer. It can  
only be converted from one form  
to another. The total number of  
bugs in the software always  
remains constant...!
