Instead of using the command line to display or configure your ip with "ipconfig", you can download wntipcfg from Microsoft which gives you the same GUI as the old winipcfg.

Download:

CODE

<http://microsoft.com/windows2000/techinfo/reskit/tools/existing/wntipcfg-o.asp>

Then follow these steps:

Install it (the default is c:\program files\resource kit\)

Copy wntipcfg.exe to c:\windows

Rename it to winipcfg.exe

Now you can just click on run, then type in "winipcfg".
