

Default Setting up Fluxbox in BT4 R1

So this guide is for those that choose to upgrade from BackTrack 4 final to the R1.
This does not really apply if you are downloading the R1.iso.
Please keep in mind that this is this a new release and there may be bugs
(please report them)! Due to the image sizes and quantity, I have this hosted on my blog.

Setting up Fluxbox in BT4 R1

EDIT: I totally forgot to add the credits to Brigante and crossbower who are the main architects for
fluxbox on BT4, and emgent for work on the backtrack-dragon script.
Thanks guys for the work.

EDIT: The kde gui tools are located in
Code:

```
/opt/kde3/bin
```

if you want to use them.

Just open a terminal and got to the above and then look for kate or kdpf or whatever little tool you just
have to have.
