

HOW TO CAPTURE STREAMING MEDIA

//////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @
TekGyd | itechhacks | Mukeshtricks4u*////////

many websites (<http://www.smashits.com>) stream songs and videos
people believe they cannot be downloaded, quite why i dont know. they kinda think there is no file present to
dwnld

once the file is located it can then be retrieved by nettransport
nettransport is able to dwnld any file whether ftp or rtsp etc

1. Download Project URL Snooper 1.02.01 from <http://rain66.at.infoseek.co.jp/>
2. Install URL Snooper (and WinPcap together)
3. Don't run URL Snooper when it is done installing
4. Restart computer
5. Open Project URL Snooper
6. Click on the General Options Tab
7. user posted image
8. Chose a network adapter
9. Now click on the search tab
10. Click Sniff Network
11. Go to a webpage and you should see some results in the results list
12. If nothing is appearing then chose another network adapter, until one works
13. Now you are ready to begin searching
14. Click the "Hide Non-Streaming URLs" option to hide all <http://> references and only show URLs corresponding to streaming audio/video (rtsp, pnm, wma, etc.)
15. Then click Sniff Network
16. Your links should appear as you begin streaming your file
17. Select your desired stream user posted image
18. usually rm file user posted image
19. On the bottom there should be the link which you simply copy user posted image
20. Download nettransport from here ftp://down_transport:123@s1.5fox.com/NT2Setup_multi.EXE or
ftp://nettransport:nettransport@61.153.24...Setup_multi.EXE
<http://lycos26486.l97.lycos.com.cn/download.htm>
21. Install it
22. Click on new
23. Paste link

now you should be able to download any file
if u need ne help
jus ask
i think dialups may have problems
