

Ever want a quicker way to shutdown XP without navigating through the start menu, or using a third party shutdown utility Here is a script that will do just that.

Right click the desktop and choose New Shortcut. Copy and paste this script or type it in.

```
%windir%\System32\shutdown.exe -s -t 0
```

Choose Next and name it whatever you like. I name mine OFF. Click Finished. Right click and choose properties and pick a Icon for it if you'd like. I use a wall light switch Icon. I drag mine into my QuickLaunch toolbar for one click shutdown.

Enjoy!
