How to use the SysKey utility to secure the Windows Security and make more difficult to break into your laptop

Syskey is one of another security mechanism present i windows to secure user credential. most of the users
did\'nt know about this feature available in windows

You can use the SysKey utility to additionally secure the SAM database by moving the SAM database encryption
key off the Windows-based computer. The SysKey utility can also be used to configure a start-up password that
must be entered to decrypt the system key so that Windows can access the SAM database. This article describes
how to use the SysKey utility to secure the Windows SAM database.

Configure Windows System Key Protection or How to make this !!!

To Configure Windows System Key Protection, follow these simple steps:
Step-1 Press windows +R key or open command prompt, and type "syskey", and then press ENTER.
Step-2 Now "Click Update".
Step-3 Click Password Startup and u can Configure password mannually and u can choose own password"
[if you want to require a password to start Windows. Use a complex password that contains a combination of
upper case and lower case letters, numbers, and symbols. The startup password must be at least 12 characters
long and can be up to 128 characters long.]

Step-4 Now click OK and restart your windows . now u have done

Note If you must remotely restart a computer that requires a password (if you use the Password Startup
option),

enjoy !!!!!!
