Here is the best way to crack the bios password in win 95/98:

 ///////////*1000+ HACKING TRICKS & TUTORIALS - ebook By Mukesh Bhardwaj Blogger - Paid Version - only @ TekGyd | itechhacks | Mukeshtricks4u*///////

--Follow the steps below:

1) Boot up windows.
2) go to dos-prompt or go to command prompt directly from the windows start up menu.

3) type the command at the prompt: "debug" (without quotes ninja.gif)
4) type the following lines now exactly as given.......
o 70 10
o 71 20
quit
exit

4) exit from the dos prompt and restart the machine

password protection gone!!!!!!!!!!!!! biggrin.gif

EnjoYYYYYYYYYY

PS: I tested this in Award Bios........
There seems to be some issue regarding display drivers on some machines if this is used. Just reinstall the drivers, Everything will be fine...........

I have not found any other trouble if the codes are used.

To be on safe side, just back up your data..........

The use of this code is entirely at ur risk.......... It worked fine for me..........
